

RESIDENTIAL PROJECTS

Faber Interiors offers both comprehensive designs of apartments and houses, as well as arrangements of individual rooms such as kitchens, bathrooms and dressing rooms. We provide assistance after the purchase of an apartment in developer condition. We provide technical support and facilitate the planning of optimal changes in the layout of rooms.

We provide professional advice and selection of finishing materials.

FUNCTIONAL ARRANGEMENT

We begin each project by developing full functional layout, which is intended to illustrate the new arrangement of the entire apartment.

We include in it the real dimensions of the of furniture and appliances.

We look for the optimal form of the interior, taking into account habits and needs of users.

We take into account the individual expectations of each of them and we try to present and discuss several alternative versions, in order to jointly choose the most favorable one.

We ask a lot of questions through which we get to know our customers. A well thought-out plan will result in because it will save time, money and nerves at further stages of the work.

In addition, it is a kind of base of reference for further arrangements, such as a plan for electrical plumbing and drainage, which will facilitate planning the location of electrical outlets, light points lights and drains.

We focus on the practicality of the proposed solutions.

Our goal is satisfaction of future users.

BATHROOM

The bathroom is one of the most important areas in the house. Every day it is used by all household members. Its functionality is therefore extremely important for their daily comfort. Let's not forget that this space should be decorated not only practical but also stylish, so that its use would be to everyone equally pleasant. Bathroom design can sometimes be quite a challenge - especially when we have a small room to develop. We try to make our proposals to be consistent and specific. Each time we choose the finishing materials based on the indications of Investors. Due to the wide range of available options we are able to equally interestingly equip economical interiors as well as those belonging to customers with a slightly more affluent wallet.

KITCHEN

A well-designed kitchen forms the center of the home.

It is where we spend a lot of time preparing meals.

It is also where every successful party ends.

This place like no other must meet diverse needs and expectations of users.

This is where ergonomics and thoughtful solutions are so important.

Personalizing the design and adapting it to the requirements and habits of Investor is our priority.

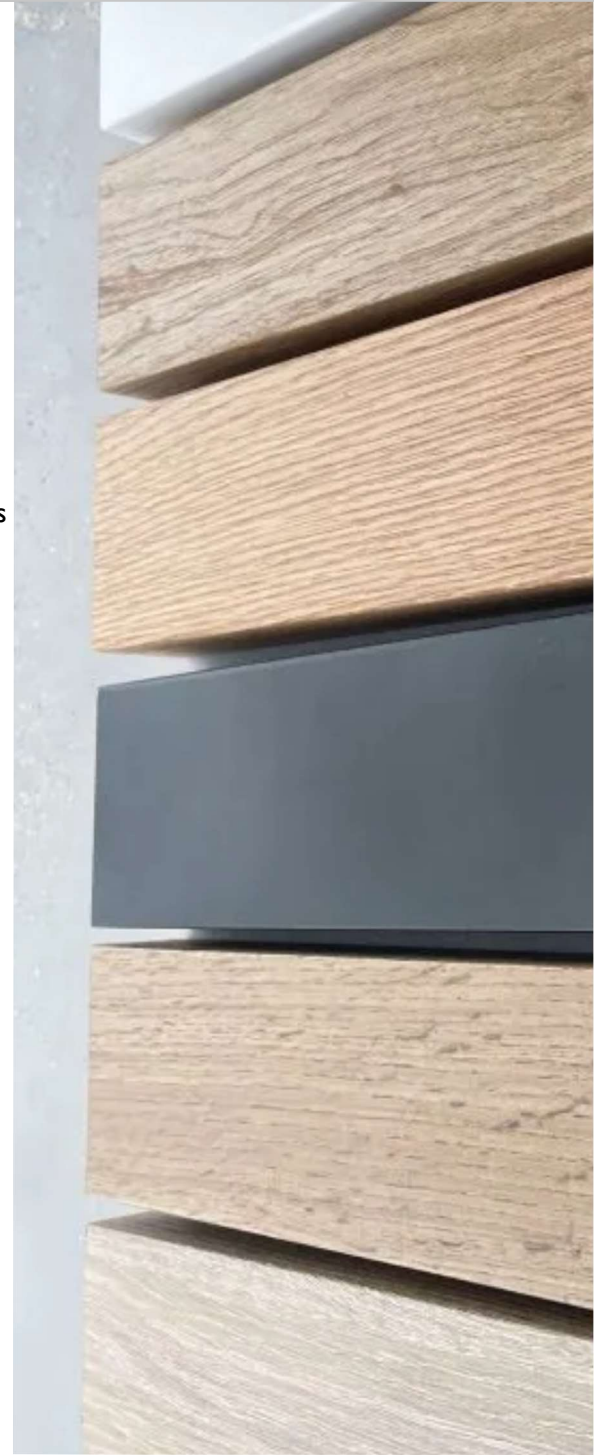

Thanks to a wide range of materials with improved functional parameters and a wide range of household appliances we create interiors beautiful, durable, and at the same time cozy.

We are sure that the use of solutions designed by us

will facilitate our customers' work and provide them with the right comfort.

We also do not forget about the appropriate illumination of the interior.

We take care of it, so that using the kitchen is a real pleasure.

DRESSING ROOM

Dressing room for some time is no longer a luxury for the chosen few.

Today, even small apartments with skillful arrangement of available space can have it.

Dedicated accessories such as lifting clothes rails or pull-out hangers for pants and ties make it easier to organize the space.

Dressing rooms designed by us are an integral part of a complete apartment design.

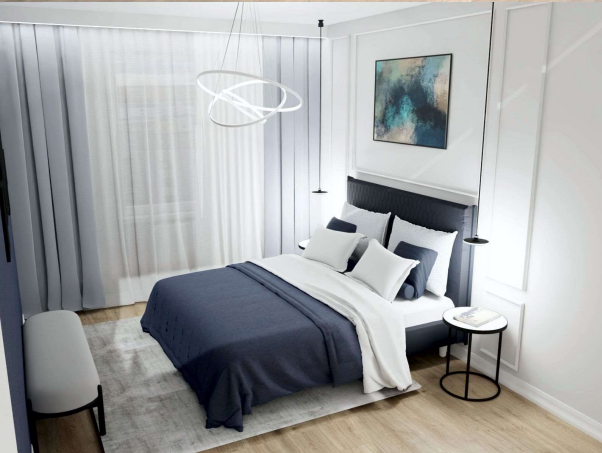

We try to make their colors and style to be consistent with the other rooms, and through the use of mirrors we add lightness to the interiors.

We also want them to contain all the necessary equipment such as a vacuum cleaner or an ironing board.

Thanks to this, the remaining space in the apartment can be minimalist and not overloaded with unnecessary elements

LIVING QUARTERS

The main feature of a good design is its consistency. Keeping this in mind, we create interiors that permeate each other and complementary stylistically. While staying in any room of a furnished apartment, we can easily identify the common features of a given design. This does not mean, of course, that individual rooms are bland or devoid of individual accents. Stylistic matching arrangements in different rooms to the tastes of the people living in them is very important to us. We never forget to ask Investor and his family about hobbies or favorite colors. The most important thing is to make each household member feel comfortable and familiar with their private surroundings, and the whole project had its unique, individual character.
